#### Efficacy of Olive Oil.

Medical authorities are generally agreed as to the value of olive oil medicinally, finding it also a potent agent for any defects of the excretory ducts, especially the skin. Eczema has rapidly disappeared upon a discontinuance of starch foods and the substitution of a diet of fresh and dried fruits, milk, eggs and olive oil. The beneficial effects of the latter, when thus taken in conjunction with a fruit diet, have frequently been remarked in respect to the hair, nails and scalp, supplying to the sebaceous glands the oily substance which they secrete when in a healthy condition, and the absence of which is the cause of debility of the hair, frequently ending in baldness, says The Scientific American. It has long been observed that those who treat olive oil as a common article of food and use it as such are generally healthier and in better condition than those who do not, and its therapeutic and prophylactic properties are very favorably regarded by medical men. It is known to be destructive to certain forms of micro organic life, and for the eradication of such from the system its internal use has been successfully resorted to.

#### Thunderstorms.

Do not imagine that because a heavy thunderstorm is far away to leeward CAPILA STOCK \$100,000,00. it is not likely to arise and wet you. Even if the wind is blowing right against the cloud it will come your way all the more surely, for thunderstorms always travel against the wind.

The reason for this is that there is invariably a countercurrent of air above the breeze that you feel close to the earth, and this sky high wind blows in the opposite direction to the one which alone you can detect. Thus the tempest seems to work its way right through the wind's eyes in a very contrary sort of way.

Fog never does this; neither does ordinary rain-at least very seldombut snow or slect some time works its way up wind just as the tempest does. Sheet lightning, by the way, is not a reflection in the sky of a forked flash many miles away. You can tell how far away a tempest is by counting the number of seconds that pass between First-class work at the .... the flash and the peal. Each second Herald.
